

Part B: Figma Screen

Part C: 2 Test cases

Test Case Number: 1

Test Name: Auth protects welcome page and performs correct login attempts
Test designed by: Jordan

Date test run: 29/05
Test run by: Jordan

Test purpose and goal

To confirm the application protects the welcome page from unauthorised access, shows an error for invalid login details, and allows a valid Firebase user to sign in successfully

Test setup instructions

1. Open group folder using VS Code Live Server.
2. Make sure to start with the user signed out in Google Chrome.
3. Use the Firebase test account testuser1@mq.com with password testuser1

Test preconditions and dependencies

- Firebase email/password authentication is enabled
- The test user exists in firebase authentication
- The test user is signed out before the test begins
- The application files are running from the group files folder

Test Steps:

Step #	Step Instruction	Expected Result (What should the tester see after completing the step instruction)	Actual result seen in test	Step passed? (yes/no)
1	Open index.html directly in the browser while signed out.	The app does not allow access to the protected Welcome page.	Opened index.html while signed out. The protected Welcome page was not accessible.	Yes
2	Observe the page after trying to access index.html.	The user is redirected to login.html.	The browser redirected to login.html as expected.	Yes
3	Enter testuser1@mq.com in the Email field.	The email value appears in the Email field.	The email address testuser1@mq.com appeared in the Email field.	Yes
4	Enter an incorrect password and click Sign In.	The app does not sign in and displays a sign-in error message.	The incorrect password did not sign in. A sign-in error was shown and the user stayed on the login page.	Yes
5	Replace the password with the correct password, testuser1.	The password field accepts the corrected password.	The incorrect password was replaced with the correct password, testuser1.	Yes
6	Click the Sign In button again.	Firebase authenticates the valid credentials and redirects to index.html.	The valid account signed in successfully and the app redirected to index.html.	Yes
7	Check the welcome message and navigation options.	The page displays Welcome User 1 and shows Browse Marketplace, My Listings, and My Shortlist options.	The Welcome page displayed Welcome User 1 and showed Browse Marketplace, My Listings, and My Shortlist.	Yes

Test Signed off: Jordan

Test Case Number: 2

Test Name: Listings page shows signed-in user's items only

Date test run: 02/06

Test run by: Jordan

Test designed by: Callum

Test purpose and goal

To confirm group member's listings page by verifying a sign-in user can only see the items connected to their own firebase user account

Test setup instructions

1. Open group files using VS code and select open with Live server
2. Sign into any user account before starting
3. Make sure firebase has items owned by chosen user and then do the same for another user

Test preconditions and dependencies

- Items collection created in firebase
- Have at least 1 item show in the signed-in user
- At least 1 item belongs to another test user to confirm correct filtering
- Listings page is available at mylistings.html

Test Steps:

Step #	Step Instruction	Expected Result (What should the tester see after completing the step instruction)	Actual result seen in test	Step passed? (yes/no)
1	Sign in with any test user account.	The user signs in successfully and reaches the Welcome page.	The user signed in successfully using a Firebase test account and reached the Welcome page.	Yes
2	Click My Listings on the Welcome page.	The app opens mylistings.html.	The My Listings page opened successfully.	Yes
3	Wait for the My Listings page to load.	The page displays My Listings content without authentication errors.	The page loaded without authentication errors.	Yes
4	Check that item cards are displayed for users who have listings.	Item cards owned by the signed-in user appear on the page.	The page displayed item cards connected to the signed-in Firebase user.	Yes
5	Review the seller email shown on visible item cards.	Visible item cards show the signed-in user as the seller.	The visible item cards matched the signed-in user account.	Yes
6	Repeat with the other Firebase test users.	Each user sees only listings connected to their own Firebase account.	All tested user accounts could sign in, and the My Listings page only showed items connected to the current Firebase user.	Yes
